# Table of Contents

About the Authors ................................................................. iv  
Acknowledgments .................................................................. vi

I. Summary ........................................................................... 1  
II. Introduction ....................................................................... 5  
   A. Purpose and approach  
   B. Commodities assessed  
   C. Previous work and approaches  

III. Results of Resource Assessment of Undiscovered Conventional Petroleum ........... 31  
   A. World level results, excluding the U.S.  
      1. World level total grown petroleum endowment  
      2. Comparison to previous USGS world assessments  
   B. World level results, including U.S.  
   C. Region level results  
   D. Results and rankings by assessment unit, total petroleum system, and province  

IV. Reserve Growth ................................................................. 53  

V. Preliminary Examination of Geologic Relationships ............................................... 57  
   A. Geologic characterization of assessment units  
      1. Source rocks:  
         a. Source rock age  
         b. Source rock character  
         c. Peak maturation age  
      2. Reservoirs:  
         a. Reservoir rock age  
         b. Reservoir rock depositional environment  
         c. Reservoir rock lithology  
      3. Seals: Seal rock lithology  
      4. Traps: Trap type  
   B. Other observations on geologic relationships  

VI. Field Analyses ................................................................. 139  
   A. Remaining large fields  
   B. Field size-depth-pressure-temperature relationships
VII. Onshore, Offshore, and Country Allocations ............................................. 145
   A. Onshore versus offshore resources
   B. Petroleum volumes by country

VIII. Discussion ................................................................. 153
   A. Natural gas
   B. North American natural gas supply concerns

IX. Conclusions ............................................................... 157

X. Appendices ............................................................... 159
   1A. Assessment units ranked by mean (expected) undiscovered oil
   1B. Assessment units ranked by mean (expected) undiscovered natural gas
   1C. Assessment units ranked by conventional oil endowment
   1D. Assessment units ranked by conventional natural gas endowment
   1E. Assessment units ranked by future oil volume
   1F. Assessment units ranked by future natural gas volume
   2A. Total petroleum systems ranked by mean (expected) undiscovered oil
   2B. Total petroleum systems ranked by mean (expected) undiscovered natural gas
   2C. Total petroleum systems ranked by conventional oil endowment
   2D. Total petroleum systems ranked by conventional natural gas endowment
   2E. Total petroleum systems ranked by future oil volume
   2F. Total petroleum systems ranked by future natural gas volume
   3A. Provinces ranked by mean (expected) undiscovered oil
   3B. Provinces ranked by mean (expected) undiscovered natural gas
   3C. Provinces ranked by mean (expected) undiscovered total petroleum
   3D. Provinces ranked by conventional oil endowment
   3E. Provinces ranked by conventional natural gas endowment
   3F. Provinces ranked by conventional total petroleum endowment
   3G. Provinces ranked by future oil volume
   3H. Provinces ranked by future natural gas volume
   3I. Provinces ranked by total future petroleum volume
   4. Volumes of crude oil, natural gas, and natural gas liquids and geologic attributes of
   5. Volumes of crude oil, natural gas, and natural gas liquids and geologic attributes of
      total petroleum systems containing assessment units identified in the World
6. Assessment units ranked by estimated size of their largest undiscovered oil field
7. Assessment units ranked by estimated size of their largest undiscovered natural gas field
8. Assessment units ranked by estimated number of undiscovered oil fields larger than 1024 MMBO
9. Assessment units ranked by estimated number of undiscovered natural gas fields larger than 1024 million BOE
10. Discovered and undiscovered petroleum volumes in assessed portions of countries

XI. Glossary ................................................................. 317
XII. References ............................................................ 319
