About the Editors ...................................................... vii
Dedication ............................................................... viii

Introduction ............................................................ x
  Application of Structural Methods to Rocky Mountain Hydrocarbon Exploration and
  Development
  *Connie Knight*

Chapter 1 ............................................................... 1
  Using Freehand Three-dimensional Drawings to Clarify and Verify Subsurface Structural
  Interpretations
  *Donald S. Stone*

Chapter 2 ............................................................... 15
  An Introduction to Low-temperature Thermochronologic Techniques, Methodology, and
  Applications
  *S. Lynn Peyton and Barbara Carrapa*

Chapter 3 ............................................................... 37
  An Overview of Low-temperature Thermochronology in the Rocky Mountains and Its
  Application to Petroleum System Analysis
  *S. Lynn Peyton and Barbara Carrapa*

Chapter 4 ............................................................... 71
  Using Detrital Zircon Geochronology to Solve Complex Structural Problems: An
  Application with Pitfalls in the Helena Salient of the Montana Disturbed Belt,
  West Central Montana
  *P. Ted Doughty, Kevin R. Chamberlain, and Michael C. Pope*

Chapter 5 ............................................................... 101
  Regional and Local Fractures of the Bakken Petroleum System, Williston Basin:
  Integrating Field Studies and 3-D Seismic Analysis
  *Stephen J. Angster and J. Frederick Sarg*

Chapter 6 ............................................................... 113
  The Role of Wrench Faults and Fractures in Creating “Sweet Spots” in Tight Gas
  Exploration and Production at Rulison Field, Colorado
  *Thomas L. Davis and Robert D. Benson*

Chapter 7 ............................................................... 119
  Fracture Control of P-wave Azimuthal Anisotropy in a Laramide Basement-cored
  Anticline at Casper Arch, Wyoming: Insights from Correlations with Surface Analogs
  and Curvature Analyses
  *Duke Cooley and Eric Erslev*
